The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

"Preferably" is unclear. Is the claim limited to the subsequent percentages or not?

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tan article in Macromolecules or the Tan article in ACS-Preprints or CN 1257885 in view of Stevens '415.

Each of the primary references, polymerize polycarbonate from carbon dioxide and propylene oxide. The catalyst used is a combination of Yttriumtrihaloacetate, diethyl zinc and glycerol. These references lack the ethylene carbonate or propylene carbonate.

It is known that alkylene carbonates are a by-product included with the polycarbonate when polymerizing alkylene oxide with carbon dioxide (see Stevens's col. 2, lines 61-72; col. 7, lines 32-35). Of course propylene carbonate will be the by-

product if propylene oxide was the starting ingredient. Stevens teaches these by-products can be recycled back into the feed—presumably as a cost savings measure.

It would have been obviously to recycle the inevitable propylene carbonate by-product of the primary references back into the feed as a cost savings measure. This propylene carbonate when contacted with the 3-part catalyst of the primary references forms the 4-part catalyst system of applicant's claims.
